Microsoft MS-DOS CD-ROM Extensions

The Microsoft MS-DOS CD-ROM Extensions (mscdex.exe) enable your system to
recognize a CD-ROM drive as a single drive letter under Dos. If ZE-SCSI Deluxe
detects one or more CD-ROM drivers, it adds a line to the autoexec.bat file that loads
mecdex.exe into memory whenever you start your computer.

When you install EZ-SCSI Deluxe, it searches for mscdex.exe in your system. If EZ-
SCSI can't find mscdex.exe, it'll prompt you to insert a disk with this driver. If you
don't know where to get mscdex.exe, try looking here:
     DOS disk for 6.0x or above
     DOS directory for 6.0x or above
     If you still can't find mscdex.exe, contact Microsoft.
