Chapter 1

INTRODUCTION

The **SY-6IZM/3** AGP/PCI Motherboard is a high-performance Slot 1 processor supported Micro-ATX form-factor system board. **SY-6IZM/3** uses the 82440 ZX Chipset technology and supports Slot 1 processors. This Motherboard is fully compatible with industry standards and adds many technical enhancements.

1-1 KEY FEATURES

Supports Intel Pentium® III processor (450-550MHz), Pentium® II processor (233-450MHz) & Celeron™ processor (266-433MHz)
Easy CPU settings in BIOS with the "SOYO COMBO Setup".
3D YAMAHA YMF740 Audio
ATI Rage Pro Graphics with 8MB Video memory on board
Auto-detect CPU voltage
PC98, APM, ACPI, Ultra DMA/33
Power-on by modem or alarm
Supports Wake-On-LAN (WOL)
Supports Power-On by PS/2 Keyboard
3 x 32-bit bus mastering PCI slots
1 x 16-bit ISA slot
2 x USB ports
1 x IrDA port
Supports multiple-boot function
ATX power connector
Power failure resume

SY-6IZM/3 PLATFORM FEATURES

Board Size	4-layer PCB, 24.4x22.0cm (9.6" x 8.7 "), Micro-ATX Form Factor
Slot1	Slot 1 for Pentium® III, Pentium® II & Celeron™ Processor

> ➢ Supports the following processors

> ◆ **100MHz FSB**
> Pentium® II 350/400/450 MHz
> Pentium® III 450/500/550 MHz

> ◆ **66MHz FSB**
> Pentium® II 233/266/300/333 MHz
> Celeron™ 300A/333/366/400/433 MHz
> Celeron™ 266/300 MHz

> ➢ Supports both boxed and non-boxed type of CPUs
> ➢ Includes a CPU mount kit with retention clip
> ➢ Features Auto-detection of CPU voltage

Chipset	82440 ZX AGP/PCI Set
Audio Onboard	YAMAHA YMF740 Onboard
AGP Onboard	ATI RAGE PRO
ATX Power	20-pin Male Connector
CPUFAN	3-pin CPU Cooling Fan Connector
Memory	DIMM Bank (DIMM1~3)

> ➢ Three strips of 168-pin Unbuffered SDRAM DIMM
> ➢ Supports 8/16/32/64/128MB DIMM modules in each bank
> ➢ Provides up to 256 MBytes of main memory

BIOS	System BIOS built-in, Award BIOS

> ➢ APM, ACPI and "Plug-and-Play" function
> ➢ Supports multiple-boot function
> ➢ Onboard FLASH memory for easy upgrade
> ➢ Y2K Compliant

Bus Controller	Compliant with version 2.1 PCI specifications
PCI Slots	3 x 32-bit Bus Mastering Slots
ISA Slots	1 x 16-bit ISA Slots

IDE1, IDE2	2 x 40-pin Bus Mastering E-IDE/ATAPI Ports
	➢ IDE1: Primary IDE Device Connector
	➢ IDE2: Secondary IDE Device Connector
	➢ Supports Ultra DMA/33
COM2	1 x 9-pin RS-232 Serial Connector
FDC	1 Floppy Disk Drive (FDD) Port
	(Supports 1.2MB/1.44MB/2.88MB and LS120/3-mode FDD)
IR1	5-pin Serial Infrared Device Header
Keylock	5-pin KeyLock Header
Reset	2-pin Reset Switch Header
Speaker	4-pin PC Speaker Header
TB_LED	2-pin Turbo LED Header
HDD_LED	2-pin IDE Device LED Header
PWRBT	ATX Power On/Off Switch 2-pin Header
J4, J5	2 x CD Line-in 4-pin Headers
JP1	Power-On by PS/2 Keyboard Jumper
JP3	AGP operating speed Select Jumper
JP5	CMOS Clear Jumper
JP8	Power Button Enable Jumper
JP10	External Suspend Button Header
JP44	WOL (Wake-On-LAN) 3-pin Header

SY-6IZM/3 BACK-PANEL FEATURES

PRT	1 x Onboard 25-pin Female Parallel Printer Port
COM1	1 x Onboard RS-232 Serial Port
PS/2 KB	1 x Onboard PS/2 Keyboard Connector
PS/2 Mouse	1 x Onboard PS/2 Mouse Connector
USB1, USB2	2 x Onboard USB (Universal Serial Bus) Connectors
VGA	1 x Onboard 15-pin VGA Port
JOYSTICK	1 x Onboard 15-pin Joystick Port
LINE-OUT	1 x Onboard Line-out Audio Stereo Jack
LINE-IN	1 x Onboard Line-in Audio Stereo Jack
MIC JACK	1 x Onboard Microphone Stereo Jack

1-2 HANDLING THE MOTHERBOARD

To avoid damage to your Motherboard, follow these simple rules while unpacking:

➢ Before handling the Motherboard, ground yourself by grasping an unpainted portion of the system's metal chassis.

➢ Remove the Motherboard from its anti-static packaging. Hold the Motherboard by the edges and avoid touching its components.

➢ Check the Motherboard for damage. If any chip appears loose, press carefully to seat it firmly in its socket.

> **STOP**
>
> *Warning:* Do not apply power if the Motherboard appears damaged. If there is damage to the board, contact your dealer immediately.

1-3 ELECTROSTATIC DISCHARGE PRECAUTIONS

Make sure to ground yourself before handling the Motherboard or other system components. Electrostatic discharge can easily damage the components. Note that you must take special precautions when handling the Motherboard in dry or air-conditioned environment.

To protect your equipment from electrostatic discharge, take the following precautions:

➢ Do not remove the anti-static packaging until you are ready to install.

➢ Ground yourself before removing any system component from its protective anti-static packaging. (To ground yourself, grasp the expansion slot covers or other unpainted portions of the computer chassis.)

➢ Frequently ground yourself while working or use a grounding strap.

➢ Handle the Motherboard by its edges and avoid touching its components.

Chapter 2

HARDWARE SETUP

Congratulations on your purchase of **SY-6IZM/3** Motherboard. You are about to install and connect your new Motherboard.

> **STOP**
>
> *Note:* Do not unpack the Motherboard from its protective anti-static packaging until you have made the following preparations.

2-1 PREPARATIONS

Gather and prepare all the following hardware equipment to complete the installation successfully:

1.   Slot 1 processor with built-in CPU cooling fan (boxed type).

> *Note:* This Motherboard supports non-boxed type CPUs. The heavier CPU cooling fan requires the installation of a CPU support stand.

2.   DIMM memory module
3.   Computer case and chassis with adequate power supply unit
4.   Monitor
5.   Keyboard
6.   Pointing Device (PS/2 mouse)
7.   Speaker(s) (optional)
8.   Disk Drives: HDD, CD-ROM, Floppy drive …
9.   External Peripherals: Printer, Plotter, and Modem (optional)
10.   Internal Peripherals: Modem and LAN cards (optional)

Frequently Asked Questions:

● **Do I need to install a VGA card?**

● **Do I also need to install a sound card?**

The answer is NO to both questions above, since, for your convenience, the SY-6IZM/3 Motherboard already features one built-in VGA port and three built-in audio-stereo ports (Line-out, Line-in, Microphone).

● **What kind of speaker can connect to "Line-out" port?**

This Motherboard requires a speaker with built-in amplifier to generate proper output sound volume.

2-2 UNPACKING THE MOTHERBOARD

When unpacking the Motherboard, check for the following items:

- ➢ The **SY-6IZM/3** 82440 ZX AGP/PCI Motherboard
- ➢ The *Quick Start Guide* *
- ➢ The Installation CD-ROM *
- ➢ One IDE Device Flat Cable
- ➢ One Floppy Disk Drive Flat Cable
- ➢ Serial port flat cable with a 9-pin connector bracket

* If your board comes with a driver disc and a paper manual, the Quick Start Guide and the CD-ROM are not included in the package.

	Warning: Do not unpack the Motherboard from its anti-static packaging until you are ready to install it.

Like most electronic equipment, your Motherboard may be damaged by electrostatic discharge. To avoid permanent damage to components ground yourself while working by using a grounding strap. Otherwise, ground yourself frequently by touching the unpainted portion of the computer chassis to drain the static charges.

Handle the Motherboard carefully, holding it by the edges.

You are now ready to start the installation.

2-3 INSTALLATION GUIDE

We will now begin the installation of the Motherboard. Please follow the step-by-step procedure designed to lead you to a complete and correct installation.

Warning: Turn off the power to the Motherboard, system chassis, and peripheral devices before performing any work on the Motherboard or system.

BEGIN THE INSTALLATION

Step 1. CPU Installation

Your SY-6IZM/3 Motherboard comes with a CPU retention set kit. The retention set is used to hold the processor attached to the Slot 1 CPU connector on the Motherboard.

Follow these instructions to install your Slot 1 processor correctly.

➢   Retention Module

1. Open the two sides by folding them up.
2. Push the locks on top of the CPU inward.

3. Insert the CPU into the retention module. The CPU fits in the CPU slot in only ONE way, do not try to force it in.

4. After completely inserting the CPU, push the two locks on top of the CPU outward. Now your CPU is ready for use.

To remove the CPU, press the two notches on top of the CPU inward. Now press the two slides on the retention module down and remove the CPU.

> ***Note: Installing a heat sink and cooling fan on top of your CPU is necessary for proper heat dissipation. Failing to install these items may result in overheating and possible burn-out of your CPU.***

Step 2. CPU Fan Installation

Your Slot 1 processor kit comes with a cooling fan. Mount the fan on the processor according to the instructions provided by the manufacturer. The fan is a key component that will ensure system stability. The fan prevents overheating, therefore prolonging the life of your CPU.

> ***Note:*** Remember to connect the fan to the appropriate power source.

Step 3. SDRAM Memory Module Installation

This Motherboard features 3 x DIMM Banks for 168-pin 3.3V
unbuffered DIMM modules.
This Motherboard features 3 x DIMM for 168-pin 3.3V unbuffered DIMM modules, providing support for up to 256MB of main memory using DIMM modules from 8MB to 128MB.

Number of Memory Modules	DIMM 1	DIMM 2	DIMM 3
1	Double-sided /Single-sided	Double-sided	
2	Double-sided /Single-sided		Double-sided
3	Double-sided /Single-sided	Single-sided	Single-sided
RAM Type	SDRAM		
Memory Module Size (MB)	8/16/32/64/128 Mbytes		
Note: **Because DIMM 2 and 3 are shared, double-sided DIMMs can be used in only one of the DIMMs. With single-sided DIMMs both 2 and 3 can be used.**			

Step 4. IDE Device Installation (HDD, CD-ROM)

This Motherboard offers two primary and secondary IDE device connectors (IDE1, IDE2.) It can support up to four high-speed HDD or CD-ROM.

Connect one side of the 40-pin flat cable to the IDE device (HDD or CD-ROM) and plug the other end to the primary (IDE1) or secondary (IDE2) directionally keyed IDE connector on the Motherboard. This Motherboard can support up to four HDDs.

Step 5. Floppy Drive Installation

The system supports 5 possible floppy drive types: 720 KB, 1.2 MB, 1.44 MB, 2.88 MB, and LS-120. In addition, this Motherboard supports a 3-mode (720KB/1.2MB/1.44MB) floppy commonly used in Japan.

Connect one side of the 34-pin flat cable to the floppy drive and plug the other end to the floppy drive connector on the Motherboard.

This Motherboard can support up to 2 floppy drives.

Step 6. Front Panel Connections
Plug the computer case's front panel devices to the corresponding headers on the Motherboard.

1. Power LED & KeyLock

Plug the Power LED cable into the 5-pin Keylock header.
Some systems may feature a KeyLock function with a front panel switch for enabling or disabling the keyboard. Connect the KeyLock switch to the 5-pin Keylock header on the Motherboard.
Please install according to the following pin assignment: pin 1,3 are for Power LED and pin 4,5 are for Keylock.

2. Reset

Plug the Reset push-button cable into the 2-pin Reset header on the Motherboard. Pushing the Reset button on the front panel will cause the system to restart the boot-up sequence.

3. Speaker

Attach the 4-pin PC speaker cable from the case to the Speaker header on the Motherboard.

4. Turbo LED

Connecting the 2-pin Turbo LED cable to the corresponding Turbo LED header will cause the LED to light whenever the system is in Turbo mode.

The manufacturer has permanently set this Motherboard in Turbo mode due to most hardware and software compliance to turbo mode.

5. IDE LED

Attach the 2-pin IDE device LED cable to the corresponding IDE LED header on the Motherboard. This will cause the LED to lighten when an IDE (HDD, CD-ROM) device is active.

6. ATX Power On/Off Switch

Attach the 2-pin momentary type switch to the PWRBT header for turning On or Off your ATX power supply.

Step 7. Back Panel Connections

All external devices such as the keyboard, printer, PS/2 mouse, modem, USB, monitor, joystick and audio devices (speakers/ headphones, microphone and CD/cassette player) can be plugged directly onto the Motherboard back panel.

Only after you have fixed and locked the Motherboard to the computer case can you start connecting the external peripheral devices.

When connecting an external device, use the following figure to locate and identify which back panel connector to plug the device to.
1. Onboard Serial Port COM1

External peripherals that use serial transmission scheme include:

- serial mouse,
- and modem.

Plug the serial device cables directly into the COM1 9-pin male connector located at the rear panel of the Motherboard.

2.   Parallel Port PRT

This parallel port is used to connect the printer or other parallel devices.

Plug the parallel device cable into the 25-pin female connector located at the rear panel of the Motherboard.

3.   PS/2 Keyboard

Plug the keyboard jack directly into the 6-pin female PS/2 keyboard connector located at the rear panel of the Motherboard.

4.   PS/2 Mouse

Similarly, plug the mouse jack directly into the 6-pin female PS/2 mouse connector.

5.   Universal Serial Bus USB1/USB2

This Motherboard provides two USB ports for your additional devices. Plug the USB device jack into the available USB connector USB1 or USB2.

-     USB devices under Win98 are allowed.
-     With Win95, use the flow UHCI V1.1 specifications.

6.   VGA monitor connector

Plug the monitor cable into the 15-pin female VGA connector located at the real panel of the motherboard.

7.   Onboard Joystick port/audio

This Motherboard provides Joystick port and audio.

-     Attach the joystick cable to the 15-pin JOYSTICK port at the rear panel of you motherboard.
-     This Motherboard features three built-in audio-stereo ports (labeled line-in, line-out, and mic jack) convenient to directly plug-in all your external audio devices.

Other Connections

1. Serial Port COM 2

In addition to the onboard serial connector COM1 located at the rear panel, your Motherboard comes with a second serial port COM2 equipped with a flat cable and external connector.

The Motherboard package includes one serial port flat cable with a 9-pin connector.

Plug the 9-pin end of the flat cable into the COM2 serial connector on the Motherboard, as shown in the figure below, then fix the external 9-pin connector to the rear panel of the computer case. Then plug your serial device cable directly into this 9-pin male connector located at the back of your computer.

9-pin male external
serial connector

COM 2

9-pin serial
flat cable
2. **Wake-On-LAN (WOL)**

Attach the 3-pin connector from the LAN card which supports the Wake-On-LAN (WOL) function to the JP44 header on the Motherboard. This WOL function lets users wake up the connected computer through the LAN card.

Please install according to the following pin assignment:

```
        Wake-On-LAN
     JP44 Pin Assignment

MP - Wake-up ── 3    ○
        GND ── 2    ○
       5VSB ── 1    ■
```
3. **Infrared (IR)**

Plug the 5-pin infrared device cable to the IR header. This will enable the infrared transfer function. This Motherboard meets both the ASKIR and HPSIR specifications.

Please install according to the following pin assignment:

```
     Infrared (IR1) Header
       IR1 Pin Assignment

     □   ○  ○  ○
     1  2  3  4  5

        VCC  IRRX   IRTX
              GND
```
4.   CD Line-in (J4,J5)

This Motherboard provides two CD-Line in connectors. Please connect the 4-pin audio cable from your CD-ROM drive to either CDIN4 or CDIN5. (It fits in only one, depending on the cable that came with your CD-ROM drive)

Please install according to the following pin assignment:

CD Line-in : J4,J5

Right GND Left GND

J4

1   2   3   4

Right GND GND Left

J5

1   2   3   4
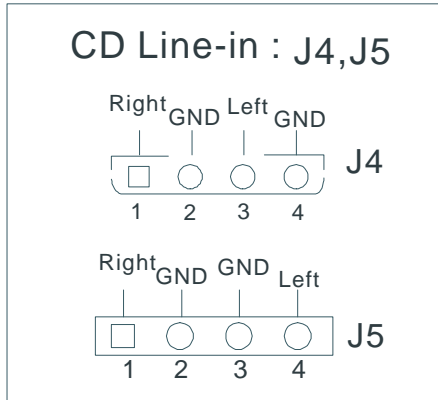

5.   Other Display Cards

Insert other types of VGA cards into the PCI or ISA expansion slots according to card specifications.

Step 8. Cooling Fan Installation

1. CPU Cooling Fan

After you have seated the CPU properly on the processor, attach the 3-pin fan cable to the CPUFAN connector on the Motherboard. The fan will stop when the system enters into Suspend Mode. (Suspend mode can be enabled from the BIOS Setup Utility, [POWER MANAGEMENT] menu.)

To avoid damage to the system, install according to the following pin assignment:

CPU Cooling Fan
CPUFAN Pin Assignment

GND___ 12V ___SENSOR

1   2   3
2. Chassis Cooling Fan

Some chassis also feature a cooling fan. This Motherboard features a CHAFAN connector to provide 12V power to the chassis fan. Connect the cable from the chassis fan to the CHAFAN 3-pin connector. Install according to the following pin assignment:

Chassis Cooling Fan
CHAFAN Pin Assignment

SENSOR—3

12V —2

GND—1
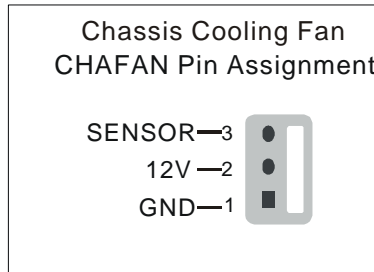

Note: CPUFAN must be installed for this Motherboard, CHAFAN is optional.

Step 9. ATX Power Supply

Plug the connector from the power directly into the 20-pin male ATX PW connector on the Motherboard, as shown in the following figure.
ATX Power

Warning: Follow these precautions to preserve your Motherboard from any remnant currents when connecting to ATX power supply:

Turn off the power supply and unplug the power cord of the ATX power supply before connecting to ATX PW connector.

The Motherboard requires a power supply with at least 200 Watts and a "power good" signal. Make sure the ATX power supply can take at least 720 mA* load on the 5V Standby lead (5VSB) to meet the standard ATX specification.

> ** **Note:*** If you use the Wake-On-LAN (WOL) function, make sure the ATX power supply can support at least 720 mAmp on the 5V Standby lead (5VSB).

Please install the ATX power according to the following pin assignment:

ATX Power

12V		5V
5VSB		5V
PW-OK		-5V
GND		GND
5V		GND
GND		GND
5V		PS-ON
GND		GND
3.3V		-12V
3.3V		3.3V
➢ **Pay special care to the directionality.**

Step 10. Power-On by PS/2 Keyboard Jumper (JP1)

You can choose to enable the Power-On by PS/2 Keyboard function
by shorting pin 1-2 on jumper JP1, otherwise, short pin 2-3 to
disable this function.
Support Power-On by Keyboard	Disable	Enable
JP1 Setting	Disable Power-On by PS/2 Keyboard function (short pin 1-2)	Enable Power-On by PS/2 Keyboard function (short pin 2-3)

> *Note:* When using the Power-On by PS/2 Keyboard function, please
> make sure the ATX power supply can take at least 720mA load on
> the 5V Standby lead (5VSB) to meet the standard ATX specification.

Step 11. Set JP3 for power up FSB clock and AGP bus clock.

JP3 is used to adjust AGP bus clock frequency depending on the
value of the front side bus (FSB) clock, also the setting of the JP3
determines the power up FSB clock which will remain effective until
the BIOS set the FSB clock to the CMOS setting.

JP3 Setting		
Power up FSB Clock	66MHz	100MHz
AGP Clock	AGP Clock = FSB Clock ÷ 1	AGP Clock = FSB Clock ÷ 1.5
*Note: The specification of maximum AGP bus Clock
    frequency is 66.6MHz.*

∗ Set JP3 to pin 1-2 short when you use a FSB 100MHz CPU.

∗ Set JP3 to pin 2-3 short when you use a FSB 66MHz CPU.

∗ Set JP3 to pin 1-2 short when you use a FSB 66MHz CPU but
    want to over-clock the FSB clock to 100MHz via the BIOS setting.

Step 12. CMOS Clearing (JP5)

After you have turned off your computer, clear the CMOS memory by momentarily shorting pins 2-3 on jumper JP5, for a few seconds. Then restore JP5 to the initial 1-2 jumper setting in order to recover and retain the default settings.
Jumper JP5 can be easily identified by its white colored cap.

CMOS Clearing	Retain CMOS Data		Clear CMOS Data	
JP5 Setting	Short pin 1-2 to retain the new CMOS settings.	○ 3 ○ 2 ○ 1	Short pin 2-3 for at least 5 seconds to clear the CMOS.	○ 3 ○ 2 ○ 1
Note: You must unplug the ATX power cable from the ATX power connector when performing the CMOS Clear operation.				

Step 13. Enable/Disable Onboard VGA(JP7)
The onboard VGA features of your Motherboard are controlled by jumper JP7.You can choose to enable or disable the available VGA function by setting JP7 accordingly.

● Leave JP7 open to enable the onboard VGA function. Then, you can plug your VGA device monitor, after the Motherboard is installed. (You do not need to install any VGA card.)

● To disable the onboard VGA options short pin JP7.

Onboard VGA	Disable		Enable	
JP7 Setting	Short pin to disable t he onboard VGA function.	⊙—⊙	Open pin to enable the onboard VGA function.	○ ○

Step 14. Power Button Enable (JP8)

Your system can be power on by either pressing a power button or typing in a password, which can be set in the BIOS SOYO COMBO Setup. To avoid being unable to power up the system due to of forgetting the password, you can place a jumper cap to short JP8. This will always enable the Power Button.

Power Button Enable	Power Button always enabled	Power Button according to BIOS setting
JP8 Setting	Short pin to always enable the Power Button.	Open pin for a Power Button function according to the BIOS setting.

Step 15. External Suspend Button (JP10)

Some cases come with a suspend button, insert the plug into JP10. In addition to through this button, the system can also enter the suspend mode through your OS.

Note: Suspend mode only functions if your Power Management mode is APM. Make sure that the BIOS setting for Power Management is APM. Windows 98 can be installed with ACPI Power Management (default is APM), in this case suspend mode will not function either.

Step 16. Power On

You have now completed the hardware installation of your Motherboard successfully.

1. Turn the power on

2. To enter the BIOS Setup Utility, press the <DEL> key while the system is performing the diagnostic checks,

> *Note:* If you have failed to enter the BIOS, wait until the boot up sequence is completed. Then push the RESET button and press <DEL> key again at the beginning of boot-up, during diagnostic checks.

Repeat this operation until you get the following screen.

3. The BIOS Setup screen appears:

ROM PCI/ISA BIOS	
CMOS SETUP UTILITY	
AWARD SOFTWARE, INC.	
SOYO COMBO SETUP	INTEGRATED PERIPHERALS
STANDARD CMOS SETUP	SUPERVISOR PASSWORD
BIOS FEATURES SETUP	USER PASSWORD

Step 17. Quick BIOS Setup

This Motherboard does not use any hardware jumpers to set the
CPU frequency. Instead, CPU settings are software configurable
with the BIOS **[SOYO COMBO SETUP]**. The [SOYO COMBO
SETUP] menu combines the main parameters that you need to
configure, all in one menu, for a quick setup in BIOS.

After the hardware installation is complete, turn the power switch on,
then press the <DEL> key during the system diagnostic checks to
enter the Award BIOS Setup program. The CMOS SETUP UTILITY
will display on screen. Follow these steps to configure the CPU
settings.

1.   Select [LOAD SETUP DEFAULT]
Select the "LOAD SETUP DEFAULT" menu and type "Y" at the
prompt to load the BIOS optimal setup.

2.   Select [STANDARD CMOS SETUP]
Set [Date/Time] and [Floppy drive type], then set [Hard Disk Type] to
"Auto".

3.   Select [SOYO COMBO SETUP]
Move the cursor to the [CPU Speed] field to set the CPU working
frequency, as shown in the following display.
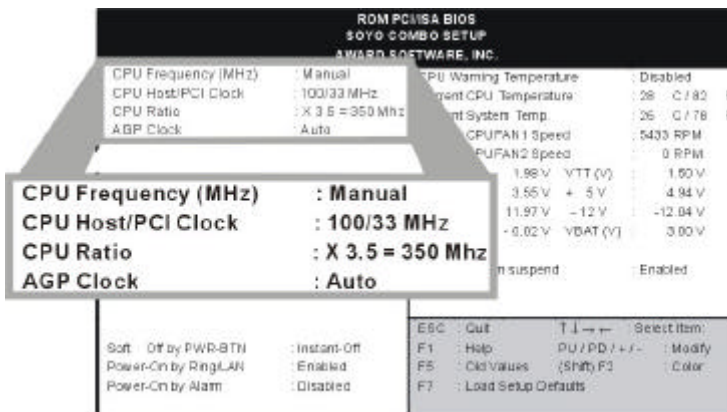

Available [CPU Speed] settings on your SY-6IZM/3 Motherboard are detailed in the following table. If you set this field to [Manual], you are then required to fill in the next two consecutive fields: (1) the CPU Ratio, and (2) the CPU Frequency.

CPU Frequency		Select the working frequency of your Pentium® III, Pentium® II, Celeron™ processor among these preset values.
☐ 233MHz (66 x 3.5)	☐ 350MHz (100 x 3.5)	
☐ 266MHz (66 x 4.0)	☐ 400MHz (100 x 4.0)	
☐ 300MHz (66 x 4.5)	☐ 450MHz (100 x 4.5)	*Note:* ☑ Mark the checkbox that corresponds to the working frequency of your Pentium® III, Pentium® II, Celeron™ processor in case the CMOS configuration should be lost.
☐ 333MHz (66 x 5.0)	☐ 500MHz (100 x 5.0)	
☐ 366MHz (66 x 5.5)	☐ 550MHz (100 x 5.5)	
☐ 400MHz (66 x 6.0)	☐ 600MHz (100 x 6.0)	
☐ 433MHz (66 x 6.5)	☐	

4.   Select [SAVE & EXIT SETUP]

Press **<Enter>** to save the new configuration to the CMOS memory, and continue the boot sequence.

Troubleshooting at First Start

● *What should I do if the Motherboard refuses to start?*

The 350MHz setting is used as default so whenever the BIOS settings are erased or reset, the board will be able to boot up. If the CPU speed was set too high and the Motherboard refuses to start up, you can always load the default values by pressing the [Ins] key during boot up.

Step 18. Power Off

There are two possible ways to turn off the system:

1.   Use the **Shutdown** command in the **Start Menu** of Windows
      95/98 to turn off your computer.
2.   Press the mechanical power-button and **hold down for over 4
      seconds,** to shutdown the computer. If you press the power-
      button for less than 4 seconds, then your system will enter into
      Suspend Mode.

You are now ready to configure your system with the BIOS setup
program. Go to *Chapter 3: BIOS SETUP*

Chapter 3

BIOS SETUP UTILITY

This Motherboard's BIOS setup program uses the ROM PCI/ISA
BIOS program from Award Software Inc.

To enter the Award BIOS program's Main Menu:

1.   Turn on or reboot the system.
2.   After the diagnostic checks, press the [Del] key to enter the
     Award BIOS Setup Utility.

Selecting items

●   Use the arrow keys to move between items and select fields.

●   From the Main Menu press arrow keys to enter the selected
    submenu.

Modifying selected items

●   Use the [Up]/[Down] keys to modify values within the selected
    fields. Some fields let you enter values directly.

Hot Keys: Function keys give you access to a group of commands throughout the BIOS utility.

Function	Command	Description
F1	Help	Gives the list of options available for each item.
Shift F2	Color	Change the color of the display window.
F5	Old values	Restore the old values. These are the values that the user started the current session with.
F6	Load BIOS Defaults	Loads all options with the BIOS Setup default values.
F7	Load Setup Defaults	Loads all options with the Power-On default values.
F10	Save & Exit Setup	Saves your changes and reboots the system.
[Esc]	Quit	Lets you return at anytime and from any location to the Main Menu.

SAVE AND EXIT SETUP

Select the [SAVE & EXIT SETUP] option from the Main Menu to save data to CMOS and exit the setup utility. This option saves all your changes and causes the system to reboot.
Type [Y] to save the changes and exit or [N] to return to the Main Menu and keep current values.

EXIT WITHOUT SAVING

Selecting the [EXIT WITHOUT SAVING] option allows you to abandon all data and exit setup, therefore ignoring all your changes.
Type [Y] to abandon changes and exit or [N] to return to the Main Menu and keep current values.

3-1 SOYO COMBO SETUP

This Motherboard does not use any hardware jumpers to set the CPU frequency. Instead, CPU settings are software configurable with the BIOS **[SOYO COMBO SETUP].**

After the hardware installation is complete, turn the power switch on, then press the <DEL> key during the system diagnostic checks to enter the Award BIOS Setup program. The CMOS SETUP UTILITY will display on screen. Then, select the [SOYO COMBO SETUP] option from the main menu and press the <Enter> key.

External Cache	Disabled		
	Enabled	Enables the external memory.	Default

3-3.3 Floppy Driver Settings

Floppy Driver Settings	Setting	Description	Note
Swap Floppy Drive	Disabled		Default
	Enabled	Changes the sequence of A and B drives.	
Report No FDD For WIN 95	Yes	Windows will release IRQ line 6 (normally used by the Floppy Disk Drive) after you disable your on-board FDD and set this field to [Yes].	
	No	Windows will reserve INT 6 for your FDD, whether it is disabled or not.	

3-3.4 Other Control Options

Other Control Options	Setting	Description	Note
Boot Up NumLock Status	On	Puts numeric keypad in NumLock mode at boot-up.	Default
	Off	Puts numeric keypad in arrow key mode at boot-up.	

3-3.5 Security Option

Use this feature to prevent unauthorized system boot-up or use of

BIOS Setup. The following table describes the security settings.

	Setting	Description
Security Option	System	Each time the system is booted, the password prompt appears.
	Setup	If a password is set, the password prompt only appears when you attempt to enter the BIOS Setup program.

3-3.6 Other Control Options

Other Control Options	Setting	Description	Note
PCI/VGA Palette Snoop	Disabled		Default
	Enabled		
	The color of the monitor may be altered when using an MPEG card. Enable this option to restore the monitor's normal color.		
OS Select for DRAM>64MB	OS2	When using an OS2 operating system.	
	Non-OS2	When using another, non-OS2 operating system.	Default

3-3.7 Typematic Settings

Typematic Settings	Setting	Description	Note
Typematic Rate Setting	Disabled		Default
	Enabled	Enables to adjust the keystroke repeat rate.	
The following [Typematic Rate] and [Typematic Delay] fields are active only if [Typematic Rate Setting] is set to [Enabled]			
Typematic Rate	6 (Char/sec) 8 (Char/sec) 10 (Char/sec) 12 (Char/sec) 15 (Char/sec) 20 (Char/sec) 24 (Char/sec) 30 (Char/sec)	Choose the rate at which a character is repeated when holding down a key.	Default
Typematic Delay	250 (msec) 500 (msec) 750 (msec) 1000 (msec)	Choose how long after you press a key down the character begins repeating.	Default

3-3.8 Other Control Options

Other Control Options	Setting	Description	Note
Assign IRQ For VGA	Disabled		
	Enabled	Use this default setting.	Default
HDD S.M.A.R.T. capability	Disabled		
	Enabled	Enable this field when your HDD supports the S.M.A.R.T. function. Consult your HDD provider for details.	

Other Control Options

Other Control Options	Setting	Description	Note

	Max Saving	1 Min	1 Min	1 Min	1 Min

The following [Doze Mode] field may be configured only if [Power Management] is set to [User Define]

Doze Mode	Disable		Default
	1Min-1Hour	When the set time has elapsed, BIOS sends a command to the system to enter Doze Mode.	System clock drops to 33MHz.

The following [Standby Mode] field may be configured only if [Power Management] is set to [User Define]

Standby Mode	Disable		Default
	1Min-1Hour	When the set time has elapsed, BIOS sends a command to the system to enter Standby Mode.	

The following [Suspend Mode] field may be configured only if [Power Management] is set to [User Define]

Suspend Mode	Disable		Default
	1Min-1Hour	In Suspend mode, the CPU stops completely (no instructions are executed.)	Only an SL-Enhanced (or SMI) CPU can enter this mode.
HDD Power Down	Disabled		Default
	1-15Min	When the set time has elapsed, BIOS sends a command to the HDD to power down. This turns off the HDD motor.	Some older model HDDs may not support this advanced function.

3-5.3 PM Events

PM Events	Setting	Description	Note
PCI/VGA Act-Monitor	Disabled		Default
	Enabled	Enables the power management timers when a [no activity] event is detected.	
IRQ 8 Break Suspend	Disabled		Default
	Enabled	Alarm function is active.	

3-5.4 Reload Global Timer Events

Power Down & Resume Events	Setting	Description	Note

3-6.1 YAMAHA Sound Chip Control Settings

	Setting	Description	Note
YAMAHA Sound	Disabled		
Chip	Enabled	Use the default setting	Default

3-6.2 PNP/PCI Configuration Controls

PNP/PCI Controls	Setting	Description	Note
Resources Controlled By	Manual	BIOS does not manage PCI/ISA PnP card IRQ assignment.	
		Requires to assign IRQ-# and DMA-# to PCI or ISA PnP manually.	
		IRQ-3,4,5,7,9,10,11,12,14,15 assigned to: _	
		DMA-0,1,3,5,6,7 assigned to: _	
	Auto	The Plug-and-Play BIOS auto manages PCI/ISA PnP card IRQ assignment automatically.	**Recommended**

3-6.3 PNP/PCI Configuration Setup

PNP/PCI Setup	Setting	Description	Note
If [Resources Controlled By] is set to [Manual]			
IRQ-# and DMA-# assigned to:	PCI/ISA PnP	Choose IRQ-# and DMA-# assigned to PCI/ISA PnP card.	IRQ-3,4,5,7,9,10, 11,12,14,15 DMA-0,1,3,5,6,7
	Legacy ISA	Choose IRQ-# and DMA-# assigned to Legacy ISA card.	IRQ-3,4,5,7,9,10, 11,12,14,15 DMA-0,1,3,5,6,7

Under this item the user can assign an IRQ to a PCI slot. However, there under some conditions the IRQ will not be assigned as selected under this item:
1. IRQs 0, 1, 2, 6, 8, 13 can NOT be assigned, because they are fixed.
2. IRQs 5, 9, 10, 11 are available
3. IRQs 3,4,7,12,14 and 15 will only be assigned if they are free. See the table below on how to free them:

PWRON After PWR-Fail	On	The system will switch on when power comes back after a power failure.	
	Off	The system will remain off when power comes back after a power failure.	Default
	Former-sts	The system will return to the state it was in before the power failure when power returns. (i.e: If the system was on, it will switch on again, if it was off, it will remain off)	

3-8.6 MULTI I/O ADDRESSES

Default settings for multi-I/O addresses are as follows:

Port	I/O Address	IRQ	Status
LPT1	378H	7	ECP/EPP
COM1	3F8H	4	
COM2	2F8H	3	

> *Warning:* If a default I/O address conflicts with other I/O cards such as sound card, you must change one of the I/O addresses to remedy to this address conflict. (I/O addresses can be adjusted from the BIOS Setup Utility)

3-9   SUPERVISOR PASSWORD

Based on the setting you have made in the [Security Option] of the [BIOS FEATURES SETUP] section, the password prevents access to the system or the setup program by unauthorized users. Follow this procedure to set a new password or disable the password:

1.   Choose [BIOS FEATURES SETUP] in the Main Menu and press [Enter]. Select the [Security Options] item and set the field to:
   a.   [System]: The password is required every time the system is booted. This means only a person who knows the password can use this computer.
   b.   [Setup]: The password is required only when you attempt to enter the BIOS Setup program.

2. Choose [SUPERVISOR PASSWORD] from the Main Menu and
    press [Enter]. The following prompt appear:

> Enter Password:

> *Warning:* If you forget or lose the password, the only way
> to access the system is to set jumper JP5 to clear the
> CMOS RAM. All setup information is lost and you must run
> the BIOS setup program again.

> *Note:* If you do not wish to use the password function,
> press [Enter] directly and the following message appears:

> Password Disabled!!

3. Enter your new password and press [Enter]. The following
    message appears, prompting to confirm the new password:

> Confirm Password:

4. Re-enter your password and then press [Enter] to exit to the
    Main Menu.

This diagram outlines the password selection procedure:

3-10 USER PASSWORD

When the user password option is on, you are not allowed to change any setting in the [CMOS SETUP UTILITY] except for changing the user's password.

The password setting procedure is similar to that for the [SUPERVISOR PASSWORD] (Refer to section 3-9).

3-11 IDE HDD AUTO DETECTION

This Main Menu function automatically detects the hard disk type
and configures the STANDARD CMOS SETUP accordingly.

Chapter 4

3D PnP AUDIO ONBOARD

4-1 ONBOARD JOYSTICK PORT

A joystick, in computer graphics, is a lever with at least two degrees of freedom used as an input device. The joystick is normally used as a locator in at least a 2-D plane.

The joystick device is most widely used in video games applications. Attach the joystick cable to the 15-pin JOYSTICK port at the rear panel of your Motherboard.

4-2 ONBOARD AUDIO

This Motherboard features three built-in audio-stereo ports (labeled line-in, line-out, and mic jack) convenient to directly plug-in all your external audio devices. Your SY-6IZM/3 Motherboard is making use of the YAMAHA YMF740 sound chipset technology and applications programs.

Note: Please refer to *Chapter 5- YAMAHA Sound Driver Installation* for a detailed procedure on how to install the audio driver depending on the particular environment (Win NT 3.5/4.0, Win 95/98) installed on your system.

4-2.1 Connecting your Audio Devices

You can connect audio devices to the following ports:

- headphones or pre-amplified speakers to the "line-out" port;
- a line-in device such as CD/Cassette player to the "line-in" port;
- a microphone to the "mic" port.
4-2.2 Connecting Speakers

You can connect external speakers to the "Line-out" port on your
SY-6IZM/3 Motherboard.

(Amplified Speakers)
> *Note:* This Motherboard requires a speaker with **built-in amplifier
> (Amplified Speaker)** to generate proper output sound volume.

Using the YAMAHA ™YMF-740 Audio Driver

To access the YAMAHA ™Sound Mixer audio driver controls, follow these steps:

1.   Open the Windows 95/98 **[Start]** menu.

2.   Select **[Programs], [Accessories],** and **[Multimedia]** path.

3.   Find and click the **[Volume Control]** option to run the application.

The audio control panel of the YAMAHA ™sound driver will appear. The audio mixer gives control of the sound inputs of all audio devices. You can adjust the internal volume and balance of each individual audio device. Also, this audio mixer lets you apply wave sound effects.

> *Important:* The **[Playback]** volume controls the master output sound volume of your system. Depending on the speaker you use you will need to adjust both the volume control on the speaker itself and the audio volume control menu under Windows 95/98 to get the proper sound output.

Chapter 5

DRIVERS INSTALLATION

Your SY-6IZM/3 Motherboard comes with a CD-ROM labeled "SOYO CD." The SOYO CD contains the user's manual file for your new Motherboard, the drivers software available for installation, and a database in HTML format with information on SOYO Motherboards and other products.

The SOYO CD Start Up Program automatically detects which SOYO Motherboard you own and displays the corresponding model name.

Step 1. Insert the SOYO CD into the CD-ROM drive

The SOYO CD will auto-run, and the SOYO CD Start Up Menu will display as shown below.
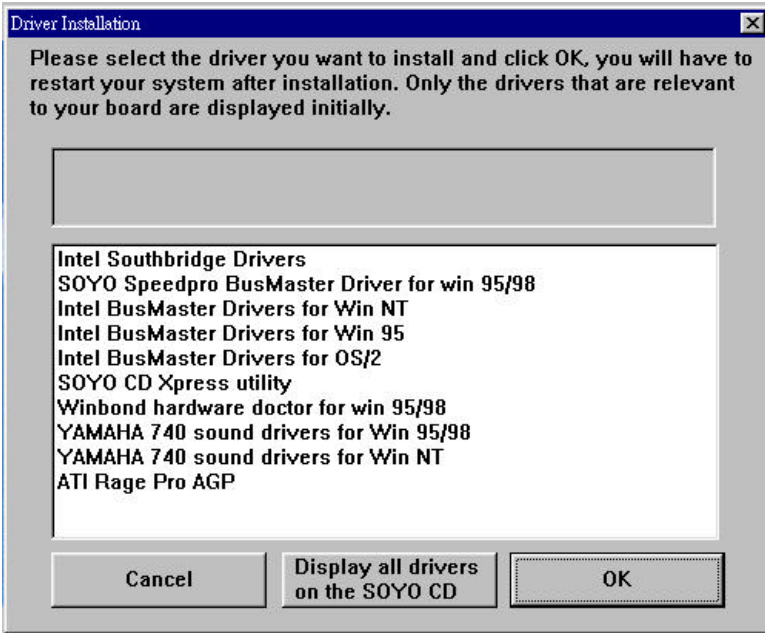

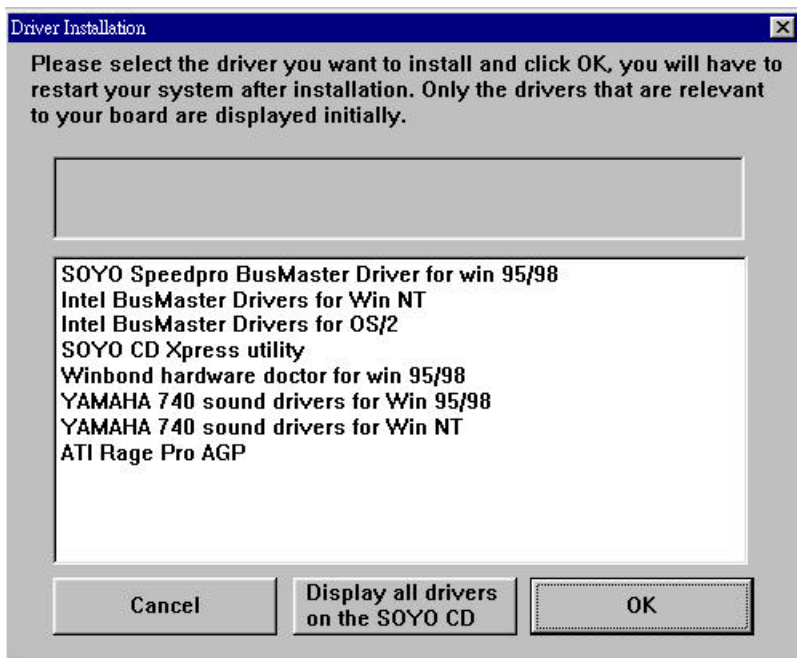

Step 1. **Install Drivers**

Click the *Install Drivers* button to display the list of drivers software that can be installed with your Motherboard. The Start Up program displays the drivers available for the particular model of Motherboard you own. We recommend that you only install those drivers.

The following drivers are available for Windows 95

(Driver Installation Menu)

The following drivers are available for Windows 98

  Please select the driver you want to install and click OK, you will have to
  restart your system after installation. Only the drivers that are relevant
  to your board are displayed initially.

(Driver Installation Menu)

A short description of all available drivers follows:

➢ **Intel Southbridge Drivers**

Because Windows 95 does not recognize the Southbridge of the newer Intel chipsets (TX, BX, ZX etc) this utility has to be run, it will update the necessary Windows files. (Only for Windows 95)

➢ **SOYO SpeedPro Busmaster Driver for Win 95/98**

Without the busmaster drivers the CPU will need to be involved every time data is read from or written to the Harddisk. The busmaster drivers make use of DMA (Direct Memory Access) to relieve the CPU of this burden, thus speeding up the system.

The SOYO SpeedPro driver makes use of an advanced caching algorithm, which gives it an advantage over other busmaster drivers.

> ➢ **Intel Busmaster Drivers for Windows 95**
> ➢ **Intel Busmaster Drivers for Win NT**
> ➢ **Intel Busmaster Drivers for OS/2**

These are the official busmaster drivers as supplied by Intel.

Note: Do NEVER install two types of busmaster drivers on your system, this will lead to conflicts and system instability. Therefore, if you install the SOYO SpeedPro Busmaster driver you can NOT install the Intel Busmaster drivers. Before installing a new busmaster driver first UNINSTALL the old busmaster driver.

> ➢ **SOYO CD Xpress Utility**

This utility will enhance your CD-ROM Drive data-thoughput by using space on the Harddisk as cache. This way application programs can access data faster. This utility is suitable for Windows 95/98.

> ➢ **Winbond hardware doctor for Windows xx**

Your motherboard comes with a hardware monitoring IC. By installing this utility Temperature, Fan speed and Voltages can be monitored. It is also possible to set alarms when current system values exceed or fall below pre-set values.

Because the Hardware monitor comes with default monitoring settings that may not be appropriate to the configuration of the actual system, it is possible that the user will have to change some of these settings.

● **Core voltage**

The core voltage differs between generations of Intel CPUs, if the Hardware monitor gives a warning, the settings for the safe range of the core voltage has to be adjusted. This can be done by simply clicking and dragging the upper and lower limit bars.

For example:

Newer Slot 1 CPUs have a core voltage of 2.0V. Therefore, set the CPU Vcore limits to 1.8V and 2.2V. For 2.8V core voltage CPUs the limits would be 2.6V and 3.0V.

● **Fan speed**

The Hardware monitor can keep track of three fans. If the user does not use all fans, the fans that are not in use should be disabled in the Hardware monitor program, otherwise the Hardware monitor will give an alarm. If this happens, make sure to disable monitoring for that fan.

➢ **YAMAHA 740 Sound Drivers for Win95/98 and Win NT**

With this application program the user can make use of the on board sound chip. Before installing the YAMHA 740 Sound Drivers, you MUST first install the YAMAHA 740 drivers for Windows 9x or NT.

➢ **ATI Rage Pro AGP**

Select this Item and click OK to start up the ATI Rage PRO AGP driver screen. Follow the instructions on the screen to install the drivers and/or application programs you need.
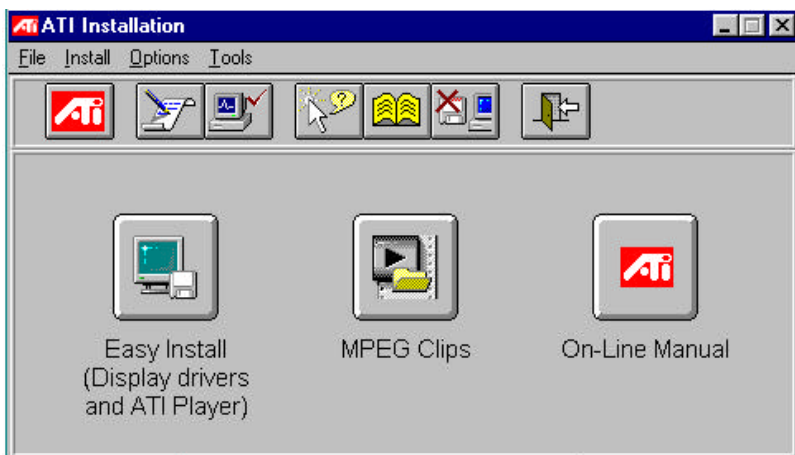

However, to display the list of all drivers software available with SOYO Motherboards, click the Display all drivers on the SOYO CD button. Please make sure to install only the drivers adapted to your system, or otherwise this cause system malfunctions.

Step 3. Select which driver you want to install and click *OK*

Notice 1: Once you have selected a driver, the system will automatically exit the SOYO CD to begin the driver installation program. When the installation is complete, most drivers require to restart your system before they can become active.

Notice 2: You may click ***Cancel*** to abort the driver installation and return to the main menu.

Notice 3: Once you have selected a driver, the system will automatically exit the SOYO CD to begin the driver installation program. When the installation is complete, most drivers require you to restart your system before they can become active.
