1-2 HANDLING THE MAINBOARD

To avoid damage to your mainboard, follow these simple rules while unpacking:

➢ Before handling the mainboard, ground yourself by grasping an unpainted portion of the system's metal chassis.

➢ Remove the mainboard from its anti-static packaging. Hold the mainboard by the edges and avoid touching its components.

➢ Check the mainboard for damage. If any chip appears loose, press carefully to seat it firmly in its socket.

> *Warning:* Do not apply power if the mainboard appears damaged. If there is damage to the board, contact your dealer immediately.

1-3 ELECTROSTATIC DISCHARGE PRECAUTIONS

Make sure to ground yourself before handling the mainboard or other system components. Electrostatic discharge can easily damage the components. Note that you must take special precautions when handling the mainboard in dry or air-conditioned environment.

To protect your equipment from electrostatic discharge, take the following precautions:

➢ Do not remove the anti-static packaging until you are ready to install.

➢ Ground yourself before removing any system component from its protective anti-static packaging. (To ground yourself, grasp the expansion slot covers or other unpainted portions of the computer chassis.)

➢ Frequently ground yourself while working or use a grounding strap.

Chapter 2

HARDWARE SETUP

Congratulations on your purchase of **SY-5EMA** Super 7 ™

Mainboard. You are about to install and connect your new

mainboard.

Note: Do not unpack the mainboard from its protective anti-static packaging until you have made the following preparations.

2-1 Preparations

Gather and prepare all the following hardware equipment to complete the installation successfully:

1. Pentium processor with CPU cooling fan.
2. DIMM memory module
3. Computer case and chassis with adequate power supply unit
4. Monitor
5. Keyboard
6. Pointing Device (PS/2 mouse)
7. Speaker(s) (optional)
8. Disk Drives: HDD, CD-ROM, Floppy drive …
9. External Peripherals: Printer, Plotter, and Modem (optional)
10. Internal Peripherals: Modem and LAN cards (optional)

2-2 Unpacking the Mainboard

When unpacking the mainboard, check for the following items:

➢ The **SY-5EMA** ETEQ82C663 PCI/AGP Mainboard

➢ This *Quick Start Guide* *

➢ The Installation CD-ROM *

➢ One IDE Device Flat Cable

* If your board comes with a driver disc and a paper manual, the Quick Start Guide and the CD-ROM are not included in the package.

> **STOP**
> *Warning:* Do not unpack the mainboard from its anti-static packaging until you are ready to install it.

Like most electronic equipment, your mainboard may be damaged by electrostatic discharge. To avoid permanent damage to components ground yourself while working by using a grounding strap. Otherwise, ground yourself frequently by touching the unpainted portion of the computer chassis to drain the static charges.

Handle the mainboard carefully, holding it by the edges.

You are now ready to start the installation.

2-3 Installation Guide

We will now begin the installation of the mainboard. Please follow the step-by-step procedure designed to lead you to a complete and correct installation.

Step 1.   CPU Installation

Follow these instructions to install your Pentium ® class processor correctly.

Locate the CPU socket labeled Socket 7 on your mainboard and note the distinctive pinhole arrangement.

Note the corresponding pinhole arrangement on the processor.
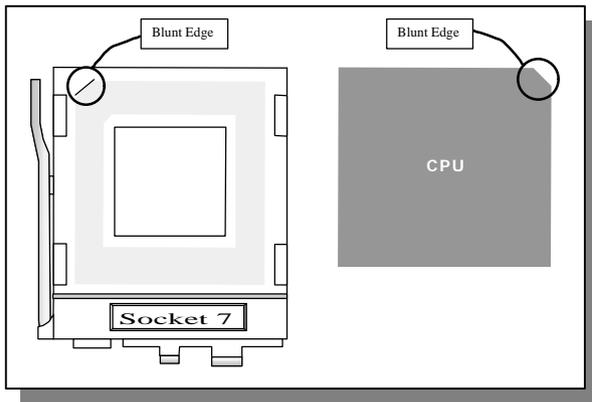

Follow these steps to install the CPU in the Socket 7:

1. Lift the socket handle up to a vertical position.

2. Align the blunt edge of the CPU with the matching pinhole distinctive edge on the socket.

3. Seat the processor in the socket completely and without forcing.

4. Then close the socket handle to secure the CPU in place.
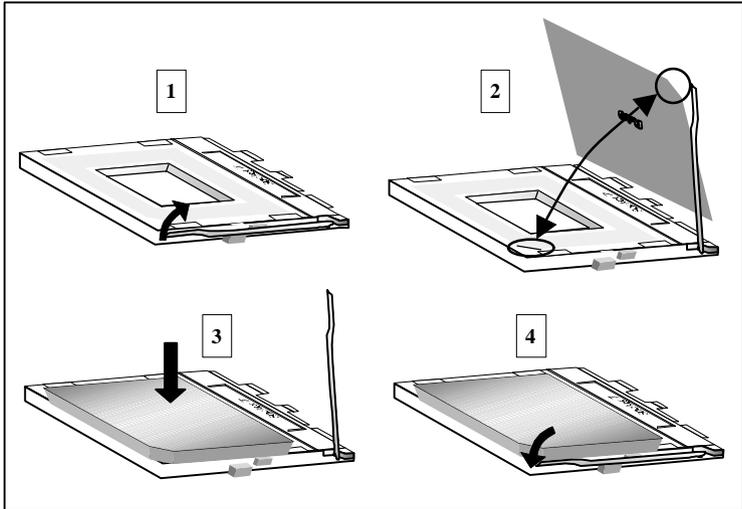

Step 2. CPU Fan Installation

Your Pentium® processor kit comes with a cooling fan. Mount the fan on the processor according to the instructions provided by the manufacturer. The fan is a key component that will ensure system stability. The fan prevents overheating, therefore prolonging the life of your CPU.

> *Note:* Remember to connect the fan to the appropriate power source.

Step 3.   CPU Voltage Setting (JP30)
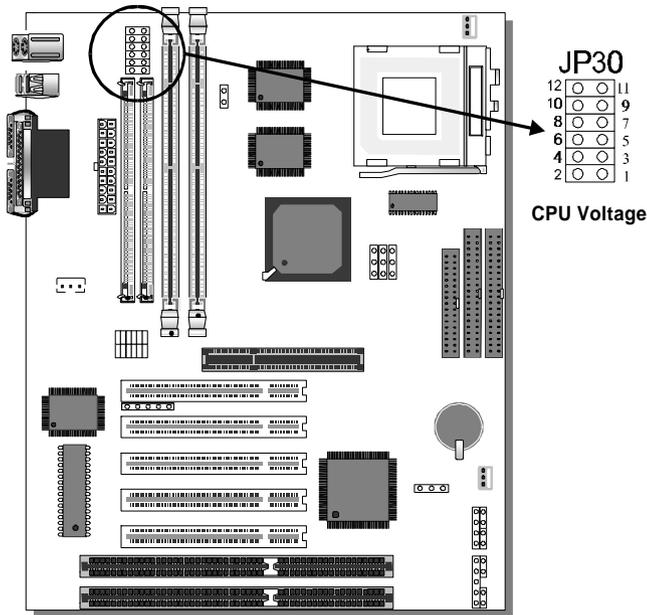

Please verify the correct voltage with your dealer before installation.
Use the following tables to set JP30 to the proper "Voltage Value",
according to the specifications marked on your CPU: This
mainboard comes with pre-configured setting of CPU voltage.
However the voltage of your CPU maybe different with the default
setting.

● **CPU VOLTAGE SETTING (JP30)**

JP30 are the only jumpers that you need to set for your CPU voltage
on this mainboard.

There are two kinds of CPU voltages currently on the market
depending on the CPU manufacturer:

➢   Single Voltage   (CPU: P54C, AMD-K5, Cyrix 6x86)
➢   Dual Voltage   (CPU: P55C, AMD-K6, AMD-K6-2 Cyrix
     6x86L,Cyrix 6x86MX, Cyrix M II)

Those processors may come in various voltages on different markets. Therefore, always make sure you know the type of the CPU you are installing and adjust the settings on JP30 accordingly.

This motherboard supports CPU voltages from 2.0 to 3.52V in 0.1V increments. Use the following tables to set the CPU voltage jumpers JP30 to match the voltage value of your CPU:

CPU Voltage Setting: JP30

Step 6. DRAM Module Installation

This mainboard supports two strips of 72-pin 5V FPM/EDO DRAM (SIMM) from 4 to 64 MB and two strips 168-pin 3.3V/5V Unbuffered DIMM modules from 8 to 256 MB. The mainboard requires SIMM modules of at least 70ns access time.
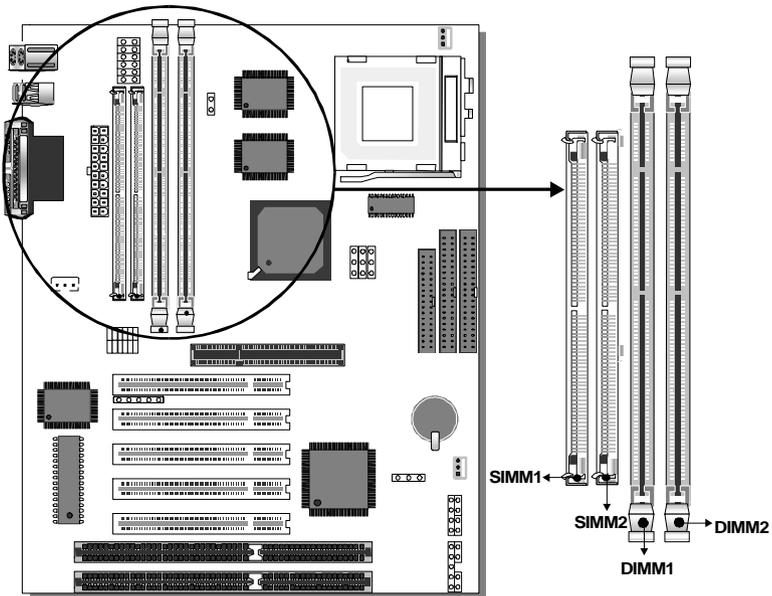

This mainboard supports both EDO and SDRAM types of memory modules.

Note:

Do not install EDO type of DIMM modules if you already use SDRAM in any DIMM bank..

● MEMORY CONFIGURATION

This mainboard features 2 x DIMM Banks for 168-pin 3.3V unbuffered DIMM modules and 2 x SIMM Banks for 72-pin

Your board comes with tow DIMM sockets and two SIMM sockets, providing support for up to 512MB of main memory using DIMM modules from 8MB to 256MB;SIMM modules from 4MB to 64MB. For 66MHz host bus CPUs use 12ns or faster DIMM modules; for 83MHz or faster host bus CPUs use 8ns modules.

Memory configuration Table

MEMORY CONFIGURATION	SIMM Bank	DIMM Banks	
	Bank 1,2	DIMM 1	DIMM 2
RAM Type	FPM/EDO/BEDO	EDO/SDRAM	EDO/SDRAM
Single RAM Module Size (MB)	4/8/16/32/64	8/16/32/64/128/256	8/16/32/64/128/256

Notice: 1.You must install two SIMM modules to complete the SIMM Bank

2. Do not use EDO type of DIMM if you already use SDRAM.

Step 7. IDE Device Installation (HDD, CD-ROM)

This mainboard offers two primary and secondary IDE device connectors (IDE1, IDE2.) It can support up to four high-speed HDD or CD-ROM.

Connect one side of the 40-pin flat cable to the IDE device (HDD or CD-ROM) and plug the other end to the primary (IDE1) or secondary (IDE2) directionally keyed IDE connector on the mainboard.

This mainboard can support up to four HDDs.

Step 8. Floppy Drive Installation

The system supports 5 possible floppy drive types: 720 KB, 1.2 MB, 1.44 MB, 2.88 MB, and LS-120. In addition, this mainboard supports a 3-mode (720KB/1.25MB/1.44MB) floppy commonly used in Japan. Connect one side of the 34-pin flat cable to the floppy drive and plug the other end to the floppy drive connector on the mainboard.

This mainboard can support up to 2 floppy drives.

Step 9. Front Panel Connections
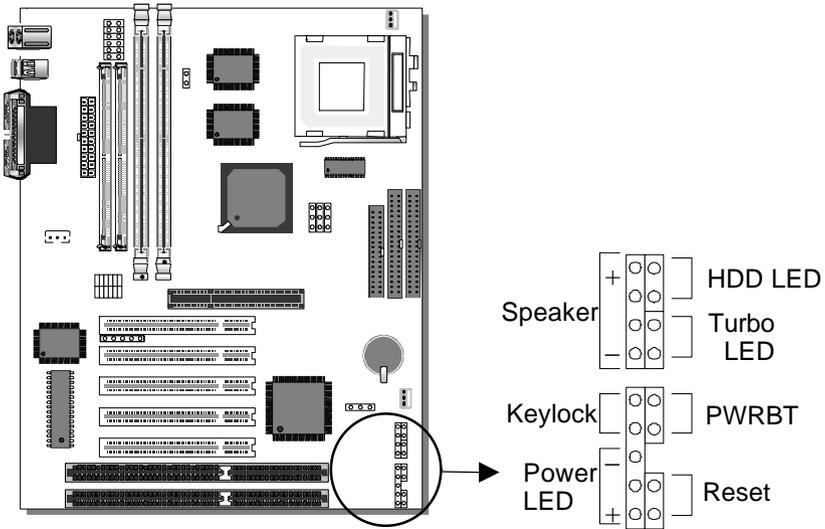

Plug the computer case's front panel devices to the corresponding connectors on the mainboard.

1. Power LED & KeyLock

Plug the Power LED cable into the 5-pin Keylock connector.
Some systems may feature a KeyLock function with a front panel switch for enabling or disabling the keyboard. Connect the KeyLock switch to the 5-pin Keylock connector on the mainboard.
Please install according to the following pin assignment: pin 1,3 are for Power LED and pin 4,5 are for Keylock.

2. Reset

Plug the Reset push-button cable into the 2-pin Reset connector on the mainboard. Pushing the Reset button on the front panel will cause the system to restart the boot-up sequence.

3. Speaker

Attach the 4-pin PC speaker cable from the case to the Speaker connector on the mainboard.

4. Turbo LED

Connecting the 2-pin Turbo LED cable to the corresponding Turbo LED connector will cause the LED to light whenever the system is in Turbo mode.

The manufacturer has permanently set this mainboard in Turbo mode due to most hardware and software compliance to turbo mode.

5. IDE LED

Attach the 2-pin IDE device LED cable to the corresponding IDE LED connector on the mainboard. This will cause the LED to lighten when an IDE (HDD, CD-ROM) device is active.

6. ATX Power On/Off Switch

Attach the 2-pin momentary type switch to the PWRBT connector for turning On or Off your ATX power supply.

Step 10. Back Panel Connections

All external devices such as the keyboard, printer, PS/2 mouse, modem, USB, can be plugged directly onto the mainboard back panel.

Only after you have fixed and locked the mainboard to the computer case can you start connecting the external peripheral devices.

When connecting an external device, use the following figure to locate and identify which back panel connector to plug the device to.

NC   12V   GND
Step 13. ATX Power Supply

Plug the connector from the power directly into the 20-pin male ATX PW connector on the mainboard, as shown in the following figure.
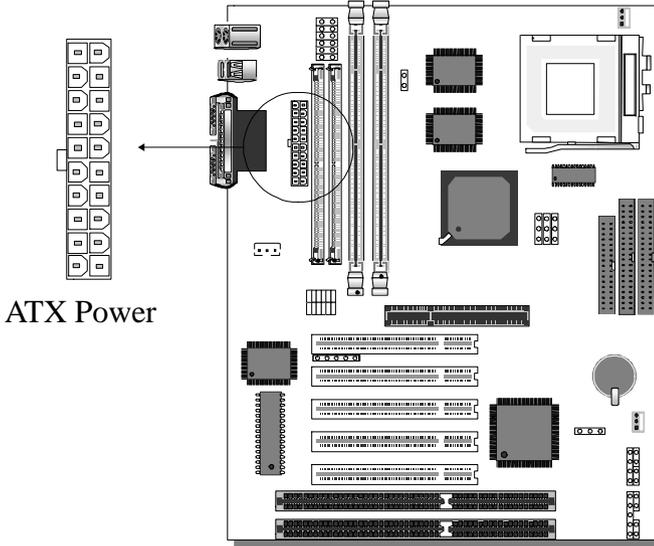

ATX Power

> *Warning:* Follow these precautions to preserve your mainboard from any remnant currents when connecting to ATX power supply:
>
> **Turn off the power supply and unplug the power cord of the ATX power supply before connecting to ATX PW connector.**

The mainboard requires a power supply with at least 200 Watts and a "power good" signal. Make sure the ATX power supply can take at least 10 mA mp* load on the 5V Standby lead (5VSB) to meet the standard ATX specification.

Note: If you use the Wake-On-LAN (WOL) function, make sure the ATX power supply can support at least 720 mAmp on the 5V Standby lead (5VSB).

Please install the ATX power according to the following pin assignment:

ATX Power

➢ **Pay special care to the directionality.**

Step 14. CPU Voltage Smart-Detect (JP4)

This Mainboard automatically detects and adjusts the CPU voltage to the proper value for Intel P54C/P55C, Cyrix 6x86(L), and AMD K6 CPUs. For some older models of CPU, their voltages can not be detected correctly, remove the jumper to disable the Smart-Detect function.

CPU Voltage Smart-Detect	Disabled		Enabled	
JP4 Setting	Open JP4 to disable Smart-Detect function	◯ 1 ◯ 2	Short JP4 to enable Smart-Detect function	◉ 1 ◉ 2

Step 15. CMOS Clearing (JP5)

After you have turned off your computer, clear the CMOS memory by momentarily shorting pins 2-3 on jumper JP5, for a few seconds. Then restore JP5 to the initial 1-2 jumper setting in order to recover and retain the default settings.

CMOS Clearing	Clear CMOS Data		Retain CMOS Data	
JP5 Setting	Short pin 2-3 for a few seconds to clear the CMOS	O O—O 1 2 3	Short pin 1-2 to retain new settings	O—O O 1 2 3
Note: You must unplug the ATX power cable from the ATX power connector when performing the CMOS Clear operation.				

Step 16. MULTI I/O ADDRESSES

Default settings for multi-I/O addresses are as follows:

Port	I/O Address	IRQ	Status
LPT1	378H	7	ECP + EPP
COM1	3F8H	4	
COM2	2F8H	3	

Warning: If a default I/O address conflicts with other I/O cards such as sound card, you must change one of the I/O addresses to remedy to this address conflict. (I/O addresses can be adjusted from the BIOS Setup Utility)

Step 17. CACHE CONFIGURATION

This mainboard has a built-in 512KB(5EMA/5) or 1MB(5EMA) Level
2 Pipelined Burst cache onboard to improve the system
performance.

The cache size and RAM locations are specified as follows:

Cache Size	Cache RAM	TAG RAM	Cacheable Range
512 KB 5EMA/5	64K x 64 on U2	16K x 8 on U5	WT: 64 MB WB: 128MB
1 MB 5EMA	64K x 64 on U2,U3	32K x 8 on U5	WT: 256 MB WB: 128MB

Step 18. Power On

You have now completed the hardware installation of your
mainboard successfully.

1. Turn the power on
2. To enter the BIOS Setup Utility, press the <DEL> key while the
   system is performing the diagnostic checks,

> *Note:* If you have failed to enter the BIOS, wait until the boot
> up sequence is completed. Then push the RESET button and
> press <DEL> key again at the beginning of boot-up, during
> diagnostic checks.

Repeat this operation until you get the following screen.

3. The BIOS Setup screen appears:

3-9   SUPERVISOR PASSWORD

Based on the setting you have made in the [Security Option] of the [BIOS FEATURES SETUP] section, the password prevents access to the system or the setup program by unauthorized users. Follow this procedure to set a new password or disable the password:

1.   Choose [BIOS FEATURES SETUP] in the Main Menu and press [Enter]. Select the [Security Options] item and set the field to:
     a.   [System]: The password is required every time the system is booted. This means only a person who knows the password can use this computer.
     b.   [Setup]: The password is required only when you attempt to enter the BIOS Setup program.

2.   Choose [SUPERVISOR PASSWORD] from the Main Menu and press [Enter]. The following prompt appear:

> Enter Password:

Warning: If you forget or lose the password, the only way to access the system is to set jumper JP5 to clear the CMOS RAM. All setup information is lost and you must run the BIOS setup program again.

Note: If you do not wish to use the password function, press [Enter] directly and the following message appears:

> Password Disabled!!
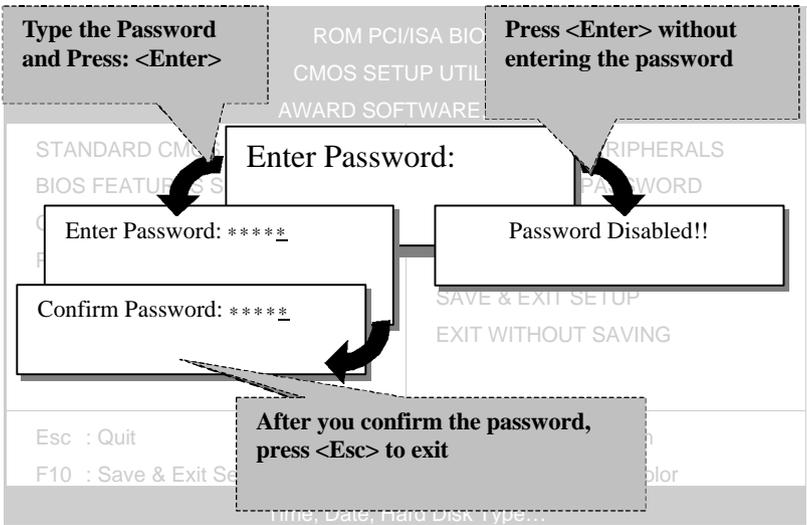

3.   Enter your new password and press [Enter]. The following
        message appears, prompting to confirm the new password:

> Confirm Password:

4.   Re-enter your password and then press [Enter] to exit to the
        Main Menu.

This diagram outlines the password selection procedure:

3-10 USER PASSWORD

When the user password option is on, you are not allowed to change
any setting in the [CMOS SETUP UTILITY] except for changing the
user's password.

The password setting procedure is similar to that for the
[SUPERVISOR PASSWORD] (Refer to section 3-9).

3-11 IDE HDD AUTO DETECTION

This Main Menu function automatically detects the hard disk type and configures the STANDARD CMOS SETUP accordingly.

Chapter 4

DRIVERS INSTALLATION

Your SY-5EMA Super 7 ™Mainboard comes with a CD-ROM labeled "SOYO CD." The SOYO CD contains the user's manual file for your new Mainboard, the drivers software available for installation, and a database in HTML format with information on SOYO Mainboards and other products.

Step 1.   Insert the SOYO CD into the CD-ROM drive
The SOYO CD will auto-run, and the SOYO CD Start Up Menu will display as shown below.
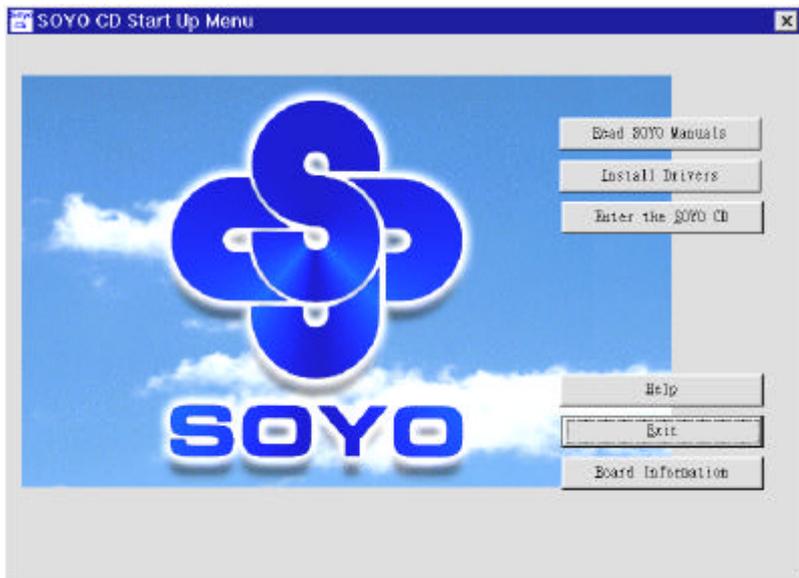

(SOYO CD Start Up Program Menu)

The SOYO CD Start Up Program automatically detects which SOYO Mainboard you own and displays the corresponding model name.

64

Step 2. Installation procedure for Windows 95/98

The following describes the best way of installing Windows 95 or Windows 98 on your 5EMA mainboard:

➢   The following BIOS default settings should not be changed:
1. The 'USB Controller' item under 'Chipset features' is set to enabled.
2. The 'USB Assigned IRQ' item under 'PnP/PCI Configuration is set to enabled.

You MUST have these two items enabled for Windows 95/98 to run properly on your
            system.

➢   Install Windows 95/98
➢   After installation of windows, you will need to install the ETEQ drivers. Follow the instruction below.

Click the **Install Drivers** button to display the list of drivers that can be installed on your mainboard. The start-up program displays the drivers available for the 5EMA and the Windows version you use. For Windows 95 four drivers will be listed (see 'Driver Installation Menu' below), for Windows 98 three drivers will be listed (the ACPI drivers will be left out). We recommend you to install all drivers, and to do so in the right sequence (top to bottom).

If you want to see all the drivers available on the SOYO –CD, click the **Display all drivers on the SOYO CD** button. Do NOT install drivers that are not suitable for you board, otherwise your system may crash.
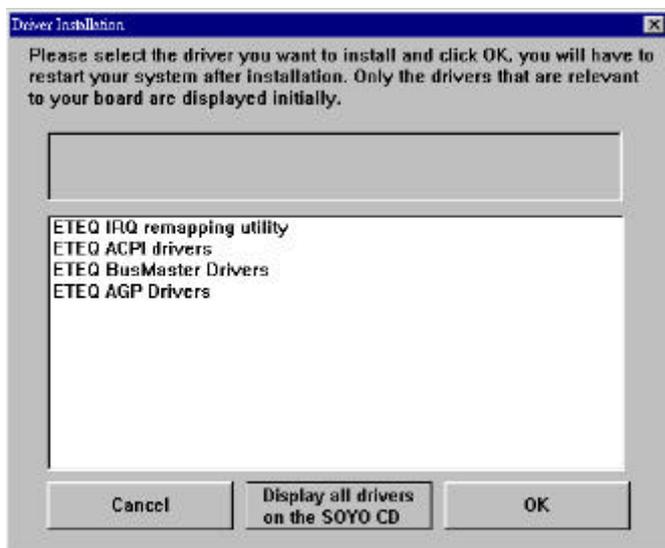

(Driver Installation Menu)

Select which driver you want to install and click *OK,* or click *Cancel* to return to the main menu. When the installation program of a driver starts running the SOYO-CD will exit. After finishing the installation, restart the SOYO-CD and install the next driver.

Note: Once you have selected a driver, the system will automatically exit the SOYO CD to begin the driver installation program. When the installation is complete, most drivers require to restart your system before they can become active.
