

PS/2 Keyboard and mouse connector: CN2, CN3

These two 6-pin female connectors are used for your PS/2 Keyboard and PS/2 Mouse. The PS/2 keyboard connector is for a standard keyboard using a PS/2 plug (mini DIN). This connector will not allow a standard AT size (Large DIN) keyboard plugs. You may use a DIN to mini DIN adapter on standard AT Keyboards. The system will direct IRQ12 to the PS/2 mouse if one is detected. If not detected, expansion cards may be using IRQ12. The figure on the right below shows the pin assignment of the PS/2 Keyboard and mouse connector.
